

OSET 16.0

The OSET Spider 16.0 is the perfect machine for riders from 5 to 10 years old, and beyond! The suspension is set for riders up to about 85 lbs, but will take large adults. The seat height is just 18.5", and the bike weighs just 59 lbs. ready to go. A powerful 600W Rare Earth - Neodymium Magnet Motor drives this machine up to 15mph. With such a light bike, and lightweight riders, this machine will easily climb steep hills and leap up large rock steps. The batteries and motor make up almost half of the total weight, and are carried extremely low in the chassis, so the bike feels even lighter than it is! Once again, a full coverage chain guard and parental speed dial allow parents to be in control of the rider. With great suspension, an awesome wavy disc caliper brake front and rear, this bike is amazing!

NEW FOR '08 Revised frame holding 2 x 14ah batteries for more power AND run time. Rear disc brake. Stronger motor, spring loaded pegs, super-flexible dyed plastic, new brake levers, stickers and a host of detail improvements. The new blue on black color scheme with black rims, hubs, bars, stem and frame look amazing.

36V Kit An amazing 36v kit is available for this bike. When the rider is ready for more, the 36v kit adds even more power and run time!
